AEROSOL ANTI-SEIZE ALUMINIUM

Description

Aluminium Anti-Seize is a high temperature anti-seize lubricant containing synthetic ester oil and aluminium powder.

It sprays to give a medium viscosity silver grease and solvent blend. The presence of solvent allows for penetration into chains, hinges, locks etc.

It is effective as a lubricant without degradation to 275°C and as a release agent to 800°C.

Applications

Aluminium Anti-Seize can be used as a general grease in a wide range of automotive, industrial, marine and construction industries. It also acts as an effective anti-seize assembly paste for bolts and flanges in high temperature environments.

Directions

Spray onto surface from 25 to 30cm ensuring a thin even coating.
